SSI and analog

For ATEX applications

The transducer marked II 3 G Ex nA IIC T4 X and II 2 D Ex tb IIIC T135 °C X IP6x meets the requirements for electrical equipment in explosion hazard areas per the following standards:

- EN 60079-0: General requirements
- EN 60079-15: Ignition class "n"
- EN 60079-31: Ignition class "t"

In addition to the ATEX requirements the transducer was certified under IECEx EPS 13.0004 X.

Ignition class "na" and "tb"

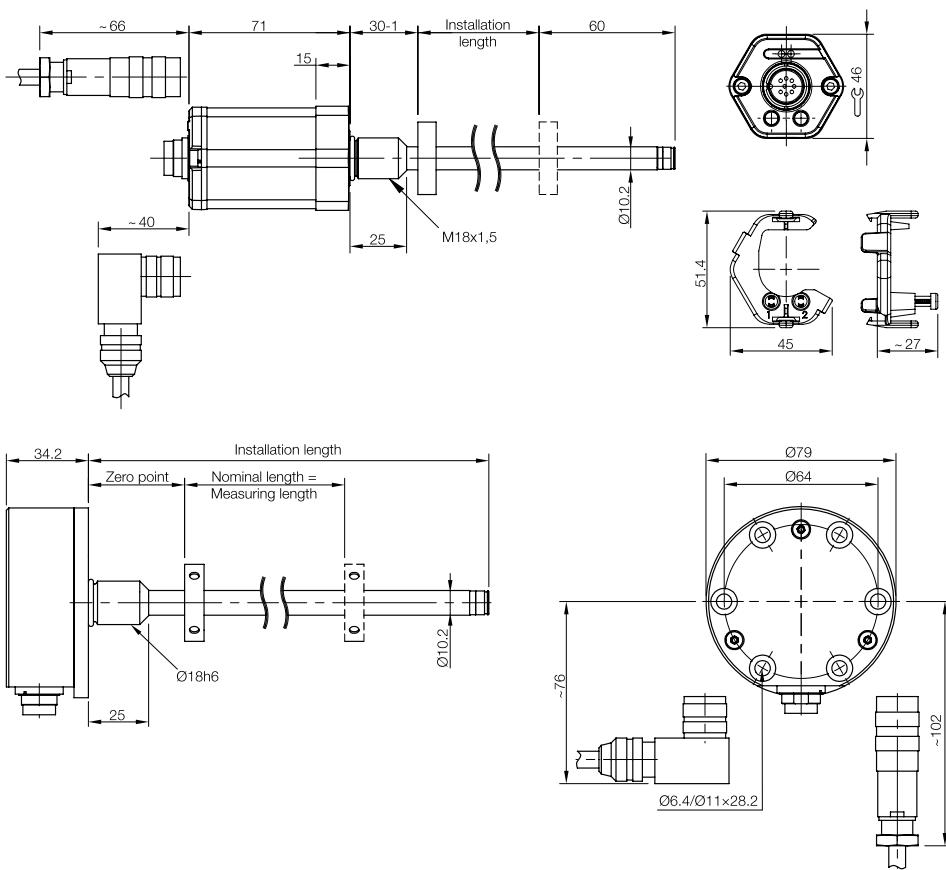

Devices in this category are intended for use in areas where an explosive atmosphere is not expected. The probability is extremely small. Even if an explosive atmosphere were to occur, it would be only for a short time. A manufacturer's declaration confirms that the indicated product meets the requirements for electrical equipment in potentially explosive areas.

Features

- Like transducer in Zone 2
- Absolute output signal
- Max. resolution of 1 µm (depending on the electronic processor unit)
- Pressure-resistant to 600 bar

Benefits

- Short housing saves valuable installation space
- Characteristic curve can be remotely set for fast startup
- CSA approval for the North American market

For explosion hazard areas and flammable dust

Transducers designated Ex d IIC T5/ T6 Ga/Gb meet the requirements for electrical equipment in potentially explosive areas. In addition they meet the requirements for areas with flammable dust Category II 2D designated Ex tb IIIC T85 °C/T100 °C Db IP67.

When in use you must follow applicable safety regulations:

- Explosion protection guidelines (EX-RL)
- Constructing electrical equipment in potentially explosive atmospheres (EN 60079-14)
- Ignition protection type "d", flameproof encapsulation (EN 60079-1)

Features

- Ex protection type "d" – flameproof encapsulation
- Filling Level Sensor in Zone 0/1
- Transducer in Zone 1
- For measuring ranges between 25 and 7620 mm
- Non-contact detection of the measuring position
- Insensitive to shock and vibration
- Insensitive to contamination
- Absolute output signal
- Max. resolution of 5 µm (depending on the electronic processor unit)
- Pressure-resistant to 350 bar

Benefits

- Short housing saves valuable installation space
- Characteristic curve can be remotely set for fast startup
- IECEx, ATEX, EAC and many additional international approvals

Pressure encapsulated housing and quick-change electronics module

The transducer J-DEXC has been specially developed for use in potentially explosive atmospheres. The important demands of the oil and gas industry for high reliability and ease of servicing are combined in the J-DEXC system. J-DEXC comprises a robust flameproof Ex housing and an electronics module that is easily accessible and replaceable for servicing.

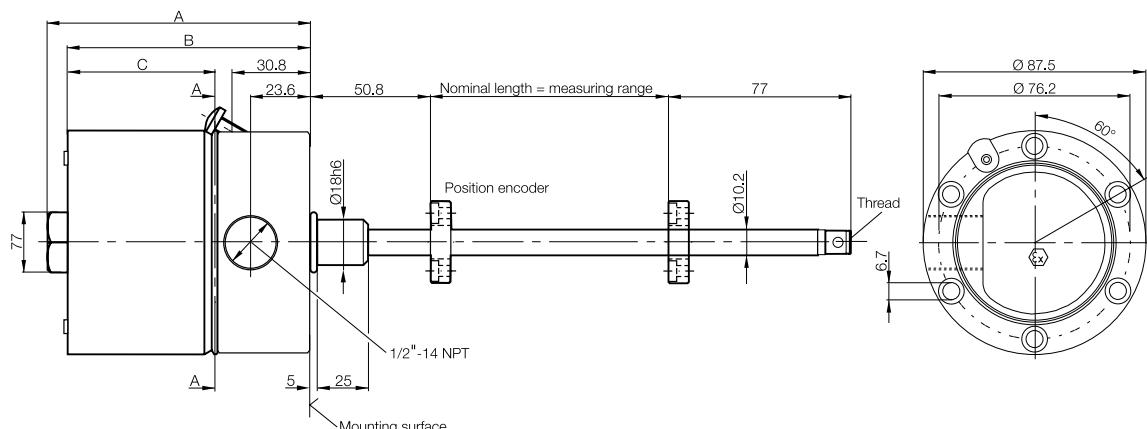

Features

- Ex protection type "d" – flameproof encapsulation
- Filling Level Sensor in Zone 0/1
- Transducer in Zone 1
- Corrosion-resistant housing available as an option
- Absolute output signal
- Max. resolution of 5 µm (depending on the electronic processor unit)
- Pressure-resistant to 600 bar

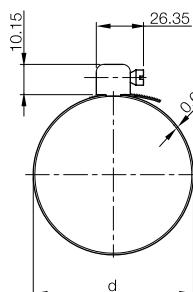

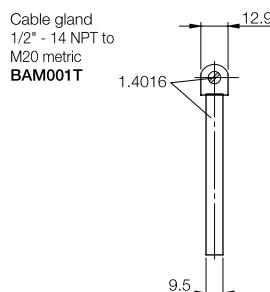

Benefits

- Replaceable electronics modules for simple field replacement
- Characteristic curve setting for rapid startup
- CSA approval for the North American market
