# **Mayer Road Tunnel Lighting Control**

With over 20 years experience in the design and development of road tunnel lighting control systems, TLA Controls Ltd is a British company

The Mayer system is installed in many countries across the world.

It is designed to comply with the specified requirements of the CIE (Commission Internationale de l'Eclairage).

## **Model TS101 Luminance Meter:**

Mounted outside a road tunnel meter
amount of light experienced by a driver approaching the road

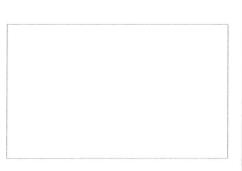

| Measuring range:   | 0–9,000cd/m² (other ranges available upon request)          |
|--------------------|---|
| Measurement        | , , , ,   |
| angle:             | 20 <sup>0</sup>   |
| ungio              | Reverse biased silicon photocell                            |
|                    | with an eye response filter;                                |
| Photocell:         |   |
| Photocell:         | The response of the photocell                               |
|                    | and amplifier is linear across the                          |
|                    | range 0 – 9,000 cd/m <sup>2</sup>                           |
| Accuracy:          | +/- 3%  |
|                    | Calibrated to a standard                                    |
| Calibration:       | traceable to the National Physical                          |
|                    | Laboratory, UK  |
|                    | Sourced 4-20mA signal which is                              |
| Output:            | terminated in a resistive load                              |
| B 1 0 1 1          | within the controller                                       |
| Resistive load:    | 100 - 800 ohms  |
| Housing:           | Extruded aluminium (IP66/IP67)                              |
|                    | with sunshield  |
| Power requirement: | 220 - 240VAC, 20VA including heater (other ranges available |
| rower requirement. | upon request)   |
|                    | Length: 44cm Width: 18cm                                    |
| Dimensions:        | Depth: 10cm   |
| Operating          |   |
| temperature:       | -40°C to +50°C  |
|                    | Wall or Pole mounting                                       |
| Optional           | equipment   |
| Accessories:       | Wash/Wipe unit with timer                                   |
|                    | for automated switching                                     |

# **Model TS150 Illuminance Meter:**

| Measuring range:       | 0–20,000 lux (other ranges available upon request)  |
|------------------------|---|
| Photocell:             | A silicon diode photocell used for the light receptor is mounted beneath a cover of transparent polycarbonate in the upper facia of the unit's exterior housing. Incorporated in the electrical system is a thermostatically controlled heater element to prevent the formation of interior moisture. |
| Accuracy:              | +/- 3%  |
| Calibration:           | Traceable to RSCAL standard   |
| Output:                | Sourced 4-20mA signal which is terminated in a resistive load within the controller   |
| Resistive load:        | 100 - 800 ohms  |
| Housing:               | Glass reinforced polyester (GRP) IP65, EExe IIT6 approval. Housing may be fixed to a flat surface.  |
| Power requirement:     | 220 - 240VAC, 20VA including heater (other ranges available upon request)   |
| Dimensions:            | Length: 22cm Width: 12cm Depth: 9cm (excluding dome); H13cm (including dome)  |
| Operating temperature: | -40 deg C to +50 deg C  |
| Heater:                | 6W  |
| Connections:           | 2 x M20 cable gland   |
